

# POE Alternate View Dashboard

## The Problem

In order to provide optimal care, a clinician must retain a great deal of ever-changing information about their patients. Additionally, each clinician has no one place to view a snapshot of their patient or a snapshot of the unit as a whole.

## Aim/Goal

Develop an electronic tool which will provide visual cues about the patient(s) to assist in formulating the patients' plan of care.

## The Team

- Julius Yang, MD, PhD
- Nan Zullo, Information Systems
- Kim Sulmonte, RN, MHA

## The Interventions

By utilizing electronic "feeds" from the POE orders and the Nursing e-Kardex, the following information is brought forward to the POE Alternate Dashboard.

Code Status	Recent Triggers
Central Line	Telemetry
Foley Catheter	DVT Prophylaxis
Restraints	PT Consult Requests
Fall, Aspiration and other Precautions	
Discharge Disposition	
Pressure Ulcers	

## The Results/Progress to Date

The screenshot shows a web-based dashboard titled "Inpatient Dashboard" with a sub-header "POE dashboard for CC7 MED/SURG Phone: 617-754-3200". The dashboard displays a table of patient information with columns for Room, Name, MRN, and various clinical indicators. The indicators include Cvl, DVT, PU, FALL, DIS, HOME, and ASPIRATION. The table lists 20 patients with their respective room numbers, names, MRN numbers, and clinical status.

Room	Name	MRN	Cvl	DVT	PU	FALL	DIS	HOME	ASPIRATION
0701-01	ZPOETEST, MARIA	1370249							
0701-02	ZPOETEST, RABARA	0088879

## Lessons Learned

There is a wealth of electronic information that is available. Pulling it together in a comprehensive way streamlines workflow and decision making to optimize the quality of patient care that is provided.

## Next Steps/What Should Happen Next:

Ongoing reassessment around the information that is brought forward to the dashboard.
