Minimally Invasive Gynecologic Surgery

Department of Obstetrics and Gynecology
Beth Israel Deaconess Medical Center
Shapiro Clinical Center, 8th floor
330 Brookline Avenue, Boston, MA 02215

Welcome to Our Practice

Many patients hesitate to seek help for conditions like heavy menstrual periods, pelvic pain, and other gynecologic-related issues, and this hesitation can diminish quality of life. Our team of physicians are specially trained in gynecologic surgery for non-cancerous conditions such as fibroids, cysts, and endometriosis.

Our gynecologic surgeons enjoy working with patients to find the treatment options that work best for each individual. We will listen to your concerns, discuss the medical and surgical options available, and provide you with education and guidance to create a care plan that's personalized. When surgery is indicated or desired, we offer innovative minimally invasive surgery that uses smaller incisions, and often results in lower levels of pain, shorter hospital stays, and a faster return to activities of daily living.

Gynecologic Conditions

Conditions often treated with minimally-invasive surgery include:

- | | |
|---------------------------------------------------------------|-------------------------------------------------------------|
| <input checked="" type="checkbox"/> Abnormal uterine bleeding | <input checked="" type="checkbox"/> Pelvic pain |
| <input checked="" type="checkbox"/> Uterine fibroids | <input checked="" type="checkbox"/> Ovarian cysts |
| <input checked="" type="checkbox"/> Endometriosis | <input checked="" type="checkbox"/> Pelvic adhesive disease |

Treatments

We strive to provide a safer and more effective alternative to traditional open surgery by performing the vast majority of our procedures via laparoscopy or hysteroscopy.

Additional, complex procedures we offer include:

- Hysteroscopic, laparoscopic, and robotic isthmocele repairs (uterine defect repairs)
- Hysteroscopic uterine septum resection
- Hysteroscopic, laparoscopic, and robotic myomectomies (removal of fibroids)
- Laparoscopic, robotic, and vaginal hysterectomies (removal of uterus)
- Robotic tubal reanastomoses (reversal of tubal ligation)

Locations

Gynecologic surgeons are available to see patients at multiple locations throughout the greater Boston area. At this time, we have surgeons in the following locations:

- Boston
- Chelsea
- Chestnut Hill
- Dedham
- Lexington

For Referring Physicians

We work closely with community-based OBGYNs, primary care physicians, and other specialists to provide consults and ensure safe surgical treatment. Our surgical assessment team reviews all referrals to ensure that patients are matched with a surgeon who is skilled in their indicated procedure, and will work to find the patient the earliest appointment.

We are available to serve as a second opinion or to assume surgical care of patients. In all cases, we will serve as consultants and will return the patient to your care once their second opinion or surgical course is complete.
