

CONFOCAL IMAGING CORE FACILITY

FUNCTION: The Confocal Imaging Core Facility at the Beth Israel Deaconess Medical Center (BIDMC) provides service and technical assistance for immunostaining, conventional and live-cell confocal microscopy, light (photodocumentation) and fluorescence microscopy, and imaging processing using Improvision Volocity software. Customized training and mentored sessions for conventional and live-cell confocal microscopy as well as brightfield and epifluorescence microscope. All work is done on a fee-for-service basis to recover costs for equipment upkeep and technical help. Priority use is given to BIDMC investigators, but outside users are accepted when extra capacity can be accommodated. This core is also an established core of the Harvard Digestive Diseases Center (HDDC) imaging core B and is supported by NIH grant P30DK034854.

Please remember to acknowledge the Harvard Digestive Disease Center and NIH grant P30DK034854 in all publications and presentations emerging from HDDC core services, resources, technology, and expertise.

FACILITIES: Equipments in the Confocal Microscopy Core Facility includes Zeiss LSM880 confocal system, Zeiss LSM880 live-cell confocal system*, Zeiss AxioImagerM1 photodocumentation microscope, a Dell image processing workstation with Improvision Volocity software and Zeiss AxioVision software.

SERVICES: The Confocal Microscopy Core Facility provides a full range of standard microscopic services, including frozen sectioning for light, fluorescence, and/or confocal microscopy, positive and negative staining, immunocytochemistry, immunohistochemistry, immunofluorescence and immunoperoxidase labeling of tissue sections. The Confocal Imaging Core facility is housed with the Histology Core Facility and Electron Microscopy Core Facility. Please see <http://www.bidmc.org/Research/CoreFacilities/ConfocalImagingCore.aspx> for details.

The prices listed below are effective August 1st, 2017
