Beth Israel Deaconess Medical Center (BIDMC) maintains 18 core research facilities, available to BIDMC investigators as well as to scientists from the Longwood Medical Area and beyond. The shared scientific services provided through the BIDMC Cores enable researchers to advance their work in an efficient and cost-effective manner, while at the same time encouraging and promoting cross-departmental collaborations among investigators.

For general information about the BIDMC Research Program, visit our site, bidmc.org/research.

### Berenson-Allen Center for Noninvasive Brain Stimulation

**Director:** Alvaro Pascual-Leone, MD, PhD  
**Co-Director:** Peter Fried, PhD; pfried@bidmc.harvard.edu  
**Coordinator:** Andrea Vatulas, (617) 667-0203; avatulas@bidmc.harvard.edu

The Berenson-Allen Center for Noninvasive Brain Stimulation provides investigators with access to leading-edge noninvasive brain stimulation technology, including transcranial magnetic stimulation (TMS) and transcranial electrical current stimulation (tCS). Our center specializes in brain-image-guided TMS, combined TMS with electroencephalography (EEG) and electromyography (EMG), and neuronavigated TMS brain mapping for a variety of research studies. Capabilities include the assessment of brain-behavioral relations, noninvasive cortical mapping, studies of brain cortical excitability, functional connectivity analysis, and cortical plasticity characterization and modulation in healthy participants and patients with a variety of neuropsychiatric disorders. Services also include basic and advanced training in TMS, customized group training in TMS for single- and multi-site clinical trials, consultation for noninvasive brain stimulation study design, development of novel brain stimulation paradigms, and advice on the design of clinical trials and the establishment of TMS clinics.

### Biomedical Research Informatics

**Director:** Griffin Weber, MD, PhD; gweber@bidmc.harvard.edu

The Biomedical Research Informatics Core (BRIC) builds and manages web-based tools that enable query, analysis, and visualization of clinical data. These include Clinical Query 2 (CQ2), which provides access to BIDMC's clinical data warehouse, and the Shared Research Information Network (SHRINE), which queries databases at other institutions. Many investigators use CQ2 or SHRINE for preliminary or exploratory research before working with the InSIGHT Core for more complex data analyses.

### Bioinformatics & Systems Biology Core

**Director:** Manoj K. Bhasin, PhD; (617) 667-0009; mbbasin@bidmc.harvard.edu

The mission of Bioinformatics and Systems Biology core is to provide expertise and infrastructure in designing and analyses of high-throughput OMICS data to answer underlying biological questions. The core supports state-of-the-art next-generation sequencing assays and analysis of data including, Whole Genome or Exome sequencing data, RNA-Seq, protein-nucleic acid interactions (ChIP-Seq) and global methylation. The core also supports analysis of proteomics, metabolomics and lipidomics data generated using Mass Spec, SomaScan, Luminex and Protein arrays. A special emphasis is made on implementing/developing systems biology frameworks and models for integrative analysis of genomic, epigenomics proteomic, metabolomic, imaging and clinical data to identifying key molecules driving pathophysiology. Core specializes in performing the single cell genomics, epigenomics and proteomics experiments and analysis to understand diseases and interventions at single cell level.

### CRC – Clinical Research Center

**Director:** Janet Mullington, PhD; jmulling@bidmc.harvard.edu  
**Manager:** Michelle Beck, (617) 975-7600; mbeck1@bidmc.harvard.edu

The Clinical Research Center (CRC) at BIDMC provides a wide array of services and facilities to investigators to support the conduct of clinical research projects. Services provided include research nursing; nutrition services; research coordination and project management services; assistance with specimen collection; sample processing, short term sample storage; general outpatient and overnight rooms, and specialty testing labs. Highly skilled CRC clinical and technical staff work with investigators to implement study protocols, ensuring consistent and accurate data collection. CRC staff also work in tandem with other units where research is occurring to provide a high quality experience for participants and investigators. In addition, the CRC has an active Metabolism & Nutrition Research Unit whose services include DXA, anthropometric measurement, indirect calorimetry, weighed meals, diet design, nutrient analysis, nutrition counseling, and education. Specialized research laboratories within the CRC include Transcranial Magnetic Stimulation, Gait and Movement, and Sleep. Research support may be provided within our research unit or by our staff in other locations in the hospital.

### Clinical Research Coordinator Core

**Director:** Janet Mullington, PhD, (617) 975-7600; jmulling@bidmc.harvard.edu  
**Manager:** Michelle Beck, (617) 975-7600; mbeck1@bidmc.harvard.edu

BIDMC’s Clinical Research Coordinator Core provides investigators with access to administrative support for clinical trials across therapeutic areas. The core is of particular value for smaller trials that do not require a full-time coordinator. Specific services include: assistance with IRB application materials and other IRB documentation; research participant recruitment and retention; assistance at study visits; case report form completion; research sample processing; and maintenance of source documentation.

### REDCap eData Collection Core

**Director:** Stephen Berry, (617) 754-8820; sberry@bidmc.harvard.edu  
**REDCap Specialist:** Chris Botte, (617) 667-3758; edc@bidmc.harvard.edu

REDCap is a web based electronic data collection system that enables basic and clinical researchers, quality control staff, and administrators to create electronic data capture forms for simple to complex multi-arm studies or to utilize the web survey functionality to create quick simple surveys or multi-variable, repeated surveys that are compliant with relevant HIPAA and IS security guidelines. This service is provided at no cost to the user and is supported by the Harvard Catalyst grant. Please contact Chris Botte or visit the REDCap web site at: https://redcap.bidmc.harvard.edu/redcap/ to learn more.

### Flow Cytometry Core

**Director:** Peter Weller, MD, (617) 735-4110  
**Managers:** John Tigges, (617) 735-4191; jtigges@bidmc.harvard.edu  
**Eric Zigon,** (617) 735-4191; ezigon@bidmc.harvard.edu

Providing scientists with the ability to rapidly analyze, enumerate and physically separate cells suspended in fluid, the Flow Cytometry Core offers investigators the newest available software and machinery with both
cell sort and analysis capabilities. A combination of technical assistance and instrumentation for electrophoresis, microfluidics, and optics and fluorescence detectors, BIDMC’s flow cytometry service can simultaneously analyze multiple parameters of individual cells at rates of up to 70,000 cells per second.

**Glycomics Core**  
Director: **Sylvain Lehoux, PhD**, (617) 667-6133; slehoux@bidmc.harvard.edu  
Scientific Advisor: **Richard Cummings, PhD**, riccumin1@bidmc.harvard.edu  
The Glycomics Core provides services, instrumentation, and expertise in glycomics to BIDMC research groups, affiliated and non-affiliated institutions, and corporate companies. The Glycomics Core offers N- and O-glycan Mass Spectrometry profiling as well as sialic acid linkage analysis for all sort of biological samples including purified glycoproteins, plasma, cells, and tissues samples.; The Core also proposes glycan microarray analyses with several Defined and Shotgun glycan arrays to choose from. Additional services available include the production of recombinant glycosyltransferases, microarray printing service, distribution of in-house reagents and consulting work.

**Histology and Microscopy (Morphology) Core**  
Director **Suzanne J. Hagen, PhD**, (617) 667-5308; shagen@bidmc.harvard.edu

**Histology Core**  
Histology Core Supervisor: **Susan White**, (617) 667-4117; swhite1@bidmc.harvard.edu  
Histotechnologist: **Lena Liu**, (617) 667-1828; zliu1@bidmc.harvard.edu  
BIDMC’s Histology Core provides investigators with services in frozen tissue preparation and sectioning, paraffin histology for cells and tissues, including services in frozen tissue preparation and sectioning, paraffin histology for cells and tissues, including paraffin histology for cells and tissues, including embedding, sectioning and routine and special staining.

**Microscopy Core**  
Confocal Microscopy and Immunostaining  
Confocal Core Supervisor: **Lay-Hong Ang, PhD**, (617) 667-5373; lang@bidmc.harvard.edu  
Confocal Specialist: **Aniket Gad, MSc**, (617) 667-1800; agad@bidmc.harvard.edu  
Electron Microscopy  
EM Core Supervisor: **Susan J. Hagen, PhD**, (617) 667-4188  
Confocal Specialist: **Kyle Smith**, (617) 667-4188; ksmith@bidmc.harvard.edu  
The Microscopy Core has two active services. The Confocal Microscopy and Immunostaining Service provides technical assistance and instrumentation for immunostaining, conventional and live-cell confocal microscopy, super-resolution microscopy, light and fluorescence microscopy, and digital image acquisition and processing. Independent or assisted use of instrumentation and/or software, and consultation for experimental design and analysis is also available.

**Molecular Medicine Core**  
Director: **Steven Balk, MD**, (617) 735-2062; sbalk@bidmc.harvard.edu  
Scientific and Technical Supervisor: **Victoria Petkova, PhD**, (617) 667-0603; vpetkova@bidmc.harvard.edu  
The core is equipped with the following instruments: Illumina MiSeq Next Generation Sequencer, Arcturus XT Laser Capture Microdissection System, Agilent 4200 TapeStation Bioanalyzer, Covaris E220 Ultra-Sonicator, ABI 7000 and 7500 Fast Real-Time qPCR systems, Li-Cor Odyssey System Infrared Imager.

**Mass Spectrometry Core**  
Executive Director: **John Asara, PhD**, (617) 735-2651; jasara@bidmc.harvard.edu  
Research Associate: **Min Yuan**, (617) 735-2652; myuan@bidmc.harvard.edu  
Sr. Research Fellow: **He Huang, PhD**, (617) 735-2653; hhuang4@bidmc.harvard.edu  
The Mass Spectrometry Core specializes in targeted and non-targeted mass spectrometry. Support is available for high accuracy mass spectral profiling with liquid chromatography/tandem mass spectrometry (LC-MS/MS). The Core’s specialty is targeted polar metabolomics analysis of all cell and tissue types, untargeted lipidomics profiling and the analysis of immunopurified peptides, proteins, protein complexes, in particular mapping and quantifying phosphorylation and other post-translational modifications involved in cellular signaling on a global and sub-cellular scale using enrichment and TMT isotopic labeling reagents. This information is then used to assemble and analysis networks of a high confidence with technical assistance and instrumentation for electrophoresis, microfluidics, and optics and fluorescence detectors, BIDMC’s flow cytometry service can simultaneously analyze multiple parameters of individual cells at rates of up to 70,000 cells per second.

**Preclinical MRI & Hyperpolarizer Core**  
Director: **Aaron Grant**, (617) 667-3265; akgrant@bidmc.harvard.edu  
The Preclinical MRI Core facility at the Beth Israel Deaconess Medical Center offers instrumentation and expertise for a broad range of magnetic resonance imaging and spectroscopy applications for small animals, excised tissue and cell culture studies. We provide fee for service within BIDMC and to outside investigators. The hyperpolarized NMR core provides imaging of tissue function at the molecular level, principally directed toward studies of metabolism and perfusion. Through the use of carbon-13 labeled substrate molecules, hyperpolarized NMR can interrogate specific metabolic pathways non-invasively and in real time. Molecular substrate molecules including pyruvate, glutamine, succinate, fumarate and choline can be imaged with hyperpolarization. In addition, tracer molecules for studying tissue perfusion are available.

**Preclinical Murine Pharmacogenetics Core**  
Scientific Advisor: **Pier Paolo Pandolfi, MD, PhD**, (617) 735-2121; ppandolfi@bidmc.harvard.edu  
Director: **John (Seán) Clohessy, PhD**, (617) 735-2147; jclohess@bidmc.harvard.edu  
The Preclinical Murine Pharmacogenetics Core (or Mouse Hospital as it is known) provides investigators with access to expertise in the design and implementation of preclinical trials to test new drugs, drug combinations and therapeutic modalities in a variety of models including standard xenograft, PDX and genetically engineered mouse models (GEMS) of human diseases. The Core offers the following services: Design and implementation of in vivo and in vitro assays to validate target specificity; collection of preclinical toxicity data for new agents or combinations of agents in GEMS; acquisition of preclinical efficacy evidences for novel drugs or drug combinations allowing for evaluation and documentation of therapeutic potential in GEMS; and facilitation in reaching the appropriate in vivo imaging facility when the efficacy of a treatment can be monitored by imaging analysis (such as micro-MRI, micro-PET, etc.).
technology (PET), bioluminescence imaging, and magnetic resonance imaging (MRI) are available to scientists. The Core’s services extend to experimental design, advanced data analysis, image fusion resources and a satellite animal facility for longitudinal studies. In 2011, the Longwood SAIF expanded with the addition of the Animal Blood Testing Facility. Blood testing is a valuable tool that can reveal a wealth of data to investigators. Testing results measured against reference standards can show abnormalities, presence of disease, health of organs, and trends in experimental groups. The Blood Lab gives investigators access to a wide range of experimental tools, including: Blood Gas, Chemistries, and Complete Blood Count (CBC) for virtually any small or large animal. For more information visit: bidmc.org/research/core-facilities/small-animal-imaging-core

Seahorse Core
Director: Pankaj Seth, PhD, pseth@bidmc.harvard.edu
The Seahorse facility is available to assess mitochondrial respiration and glycolysis through in vitro measurement of oxygen consumption rates and extracellular acidification rates. Staff will perform runs, provide training, offer initial advice for XF24 analyzer run and supply plates and cartridges on a fee for service basis.

Transgenic Core
Scientific Advisor: Brad Lowell, MD, PhD, (617) 735-3366; bloowell@bidmc.harvard.edu
Director: Joel Lawitts, PhD, (617) 632-0264, jlawitts@bidmc.harvard.edu
The BIDMC Transgenic Core is a state-of-the-art facility that produces genetically altered transgenic mice and related services to the BIDMC research community. The Core’s basic services include DNA injections; CRISPR injections; embryonic stem cell injections; embryo freezing; line import via cryopreserved sperm or embryos or line rescue via IVF.

X-ray Crystallography Core
Scientific Advisor: Jerome Groopman, MD, (617) 667-0070; jgroopma@bidmc.harvard.edu
Manager: Gabriel Brrane, PhD, (617) 667-0025; crystallography@bidmc.harvard.edu
As a method of determining the arrangement of atoms within a crystal, X-ray crystallography is a central component of many scientific investigations. Through

Animal Metabolic Physiology Core
Department: Endocrinology
PI/Director: Barbara B. Kahn
Associate Director: Odile Peroni, (617)735-3326, operoni@bidmc.harvard.edu
Contact: Kerry Wellenstein, (617) 735-3330
Our Core is designed to teach and/or perform for users various metabolic assays in vivo and in vitro. We also provide consultation and assistance on writing animal protocols regarding the services offered by the Core. For more information about the different assays and studies, please visit: www.baderc.org/cores/metabolicCore.

Blood Chemistry Core
Department: Surgery
Director: Leo Otterbein, PhD, lotterbe@bidmc.harvard.edu
Manager: David Gallo, dgallo@bidmc.harvard.edu
Hematologic analyses specifically designed to help laboratory animal and human researchers generate accurate, reliable, quality results using a small sample volume. Wide spectrum of organ specific panels. Capable of measuring blood, plasma, serum, culture media, cerebrospinal fluid, and urine. Contact David Gallo for more information and pricing.

Boston Nutrition Obesity Research Center (BNORC) Bioinformatics Core
Department: Endocrinology
Directors: Evan D. Rosen, MD, PhD and Linus T. Tsai, MD, PhD, fungen.core@gmail.com
The Functional Genomics and Bioinformatics Core provides services to investigators within BNORC and the Boston area looking to expand their research using state-of-the-art genomic applications. It utilizes next generation technologies and sequencing platforms to help identify the complex molecular mechanisms underlying human disease. Core staff can consult with researchers to ensure optimal experimental design on a case-by-case basis. Downstream or stand-alone data analysis pipelines are also offered to help researchers get the most from their datasets.

Center for Advanced Orthopaedic Studies (CAOS) µCT Core
Department: Orthopaedic Surgery
Manager: Daniel Brooks, djbrooks@bidmc.harvard.edu
The CAOS µCT core provides high resolution 3D imaging of ex vivo specimens. Our main service is imaging of rodent bones for measuring bone microarchitecture and morphology. Additionally, we can image other types of specimens up to 36 mm in diameter and 80mm in length with voxel sizes as small as 6 µm. We are available for consultation both before and after the completion or your project.

Center for Virology and Vaccine Research Flow Cytometry Core
Department: Medicine, CVVR
Manager: Michelle Lifton, (617) 735-4512, mlifton@bidmc.harvard.edu
Cell Sort Contact: Mary Laughridge, (617)735-4515; mlaughri@bidmc.harvard.edu
Flow Cytometry Tech: George Tweet, (617) 735-4612; gtweet@bidmc.harvard.edu
The Center for Virology and Vaccine Research Flow Cytometry Core offers sterile cell sorting and acquisition specifically for sorting live, unfixed and infectious human cells as well as dedicated staff for assistance with instrument operation, data analysis, and panel development.

Genomics and Proteomics Core
Center Director: Towia Libermann, PhD, (617) 667-0760; tiliberna@bidmc.harvard.edu
Genomics: Xuesong Gu, PhD, (617) 667-0761; xgu@bidmc.harvard.edu
Proteomics: Simon Dillon, PhD, (617) 667-0884; sdillon1@bidmc.harvard.edu
The Genomics and Proteomics Core provides investigators with the instrumentation, expertise and services required to study all kinds of genomics and proteomics applications. The core is equipped with state-of-the-art technologies for transcriptional profiling, genotyping, real-time PCR, proteomics and bioinformatics. Affymetrix GeneChip high-throughput and whole genome arrays are available for human and most animal models. Next generation sequencing service is provided for DNA and RNA sequencing, methylation analysis, CHIP sequencing, metagenomics and targeted sequencing. Protein biomarkers in biological samples
Non-Coding RNA core Facility
Department: Pathology
Director: Frank Slack, PhD, fslack@bidmc.harvard.edu
Dr. Winston Hide, PhD, whide@bidmc.harvard.edu
Manager: Jihoon Lim, 617-735-2611, jlim5@bidmc.harvard.edu

The ncRNA Core is a state-of-the-art, preclinical facility dedicated to accelerating discoveries in non-coding RNA at Beth Israel Deaconess Medical Center (BIDMC) and Harvard Medical School. Established in 2014 as the Institute for RNA Medicine and hosted by the BIDMC Cancer Center, the HIRM brings together leading investigators in the field to accelerate investigations into how non-coding RNA functions and how these insights can be used to develop new therapies. We offer the following services to all researchers:
1. Detection, quantification and discovery of ncRNAs including in research and clinical specimens.
2. Specialized bioinformatics for interpretation of ncRNA discoveries.
3. Precise delivery of ncRNA therapeutics to diseased tissue in vitro.
4. ncRNA-related grant writing support & consultation
5. In the future the Core plans to add: functional ncRNA characterization.

InSIGHT (Integration of Standard Information Gathering using Healthcare Technology) Core
Department: Center for Healthcare Delivery Science
Manager: Karla Pollick, (617) 975-7556; kpollick@bidmc.harvard.edu
Technical Director: Larry Markson, MD, (617) 754-8031; lmarkson@bidmc.harvard.edu

The InSIGHT Core helps researchers and quality improvement teams use the vast array of data available in BIDMC’s clinical data repositories. We help you leverage these data to answer important questions, using tools of traditional clinical epidemiology and health services research. Services range from supplementing data in traditional clinical research (e.g. pulling admission laboratory test results for every patient in a cohort you have already collected) to building complete, high-complexity, large electronic cohorts for complex analyses.

Metabolism and Mitochondrial Research Core
Department: Emergency Medicine
Director: Xiaowen Liu, PhD, (617)667-0706; xliu4@bidmc.harvard.edu

The Metabolism and Mitochondrial Research Core provides access to Xfe 96 Extracellular Flux Analyzer, Seahorse technology, as well as additional services that include technical advice in experimental design, data analysis and basic training. The Core also provides affordable access to high performance, electrochemiluminescence immunooassays using Meso QuickPlex SQ 120. This instrument provides unparalleled sensitivity and dynamic range, using low sample volume, and fast, well-organized results. You can perform multiplex biomarker and cytokine assays, test for immunogenicity or toxicity, or we can help you develop your own unique assays. In addition, the Core provides measurement of pyruvate dehydrogenase activity and quantity, Citrate Synthase quantity assay, Cytochrome C assay for mitochondrial research. Website: http://resuscitationscience.com/Display/CoreLab

Translational MRI Research Core
Department: Radiology
Director: David Alsop, PhD, dalsop@bidmc.harvard.edu
Manager: Meaghan Strob (Fox), (617) 667-2508; mfox2@bidmc.harvard.edu
MRI Technologist: Fotini Papadopoulou, fpapadopl@bidmc.harvard.edu

The Translational MRI Core of the BIDMC Department of Radiology provides state-of-the-art MRI capabilities for imaging human subjects and potentially large animals as part of research studies. The facility operates a research dedicated 3 Tesla system. In addition to commercial tools for clinical imaging, customized software and protocols for applications including functional and structural brain imaging, abdominal perfusion and diffusion, muscle functional imaging and spectroscopy are available to users. Additional customization of applications either by the Core staff or in collaboration with the Division of MRI Research is encouraged. For more information visit: bidmc.org/miresearch/
